

## Important Instructions For Liquefying

**FUL-HUMIX IS EASILY DISSOLVED IN LIQUID (IN READY TO USE DILUTIONS) WHEN USING THE SIMPLE INSTRUCTIONS ON THE PACKAGE. HOWEVER, FOR MORE CONCENTRATED BLENDS IT'S VERY IMPORTANT TO USE THE INSTRUCTIONS BELOW.**

**USE THE FINE PARTICLE SIZE FORM (THE ONE THAT LOOKS MORE LIKE A POWDER). YOUR RECEIPT SHOULD NOTATE ONE OF TWO SIZES, FINE OR GRANULAR.**

**WHEN ADDING TO SOLUTION, DO NOT EXCEED 1/2 A POUND PER ONE GALLON OF WATER. SATURATION IS CLOSER TO 1 POUND PER GALLON BUT 1/2 POUND IS EASIER TO MIX. PLEASE NOTE: FOR COMMERCIAL APPLICATIONS, **FOLIAR RATES ARE TYPICALLY ABOUT 1 GRAM PER GALLON OF CARRIER WATER.\*****

**ADD THE FUL-HUMIX TO WATER SLOWLY WHILE AGITATING WATER (DO NOT ADD THE FUL-HUMIX AND THEN THE WATER ON TOP OR YOU'RE LIKELY GOING TO FORM A PASTE).**

**USING HOT WATER, ESPECIALLY WHEN TRYING TO USE THE MAXIMUM PER GALLON, IS STRONGLY RECOMMENDED. WHERE HOT WATER IS NOT AVAILABLE ROOM TEMPERATURE OR WARM WATER WILL WORK, ESPECIALLY FOR FOLIAR RATES.**

**DO NOT BLEND WITH SOLUTIONS WITH A pH BELOW 5.5, OR THAT HAVE A HIGH CALCIUM CONTENT OR HIGH CARBONATE CONTENT (FOR THE CARBONATES NEUTRALIZATION WITH ACID SHOULD BE SUFFICIENT). ONE EXAMPLE WOULD BE A BORDEAUX MIX WHICH CONTAINS LIME.**

**AGITATE VIGOROUSLY (THE LONGER THE BETTER).**

**ALLOW THE MIXTURE TO SETTLE AND THEN POUR OFF ONLY THE LIQUID PORTION, LEAVING SEDIMENT BEHIND (THE PRODUCT IS ABOUT 15% INSOLUBLE). USING A FILTER TO HELP OMIT THE SEDIMENT MAY BE USEFUL EVEN IF IT IS SOMETHING CRUDE LIKE LANDSCAPE CLOTH, AN OLD PILLOW CASE, SHIRT ETC. IT WILL STILL BE IMPORTANT TO ADD MATERIAL SLOWLY SO IT DOES NOT FORM DRY CLUMPS.**

*Same instructions apply for all BioAg dry soluble products including TM-7, CytoPlus and some VAM blends.*

**\*FUL-HUMIX CAN DEFINITELY BE USED EFFECTIVELY AS A FOLIAR ADJUVANT, HOWEVER FUL-POWER HAS SEVERAL ADVANTAGES LIKE COMPATIBILITY AND EASE OF USE.**
